

What is *PayPlus*?

PayPlus Software, Inc. has two powerful payroll engines: **PayPlus** and **PayPlus-SQL**. Both are real workhorses and have been used by hundreds of PEOs and ASOs, from the very small to the very large, for many years. Both are reliable, accurate and fast with text and character screen—and no fancy graphics to slow down processing. Why are there two? Always the industry leader, we purchased our top competitor, who had an excellent product called SLS. We used SLS as the prototype for **PayPlus-SQL**. Now you can choose either **PayPlus** or **PayPlus-SQL** for your payroll engine, depending on your needs. Here are the similarities and differences:

Similarities

Payroll & Tax Processing: PEO/ASO

Profit Analysis

Invoicing

Emailing of Reports
