

EAGLE DATA SYSTEMS

PayPlus Custom Programming Services

Michael J. Gerbitz

For almost twenty years, Michael has been developing business application software for a variety of industries, within the Thoroughbred Software environment. He specializes in working with end-users to customize their existing software to suit their individual needs. Over the past year, Michael has joined with the PayPlus Software development team, as a sub-contractor, to develop several product enhancements including the new Electronic Child Support module. He is available to meet with (on-site) and work directly for PayPlus end-users to provide them with custom modifications, module add-ons and third-party software integration. Michael takes pride in delivering the highest level of work quality and customer care.

GREAT NEWS – Graphical User Interface!

Thoroughbred files are now compatible with a sleek and elegant graphical version of Business Basic. PayPlus users can now integrate their existing character-based applications with high-end graphics modules in real-time. New GUI modules can be developed for PayPlus users to utilize Microsoft Windows functionality such as mouse-driven events, “copy & paste”, embedded Word documents & Excel spreadsheets, imaging, integrated email and web links. PayPlus data can be imported, exported and even maintained in external Windows-based applications. Michael has designed and developed various graphical applications using this powerful new development tool.
